What kind of information can we backup?

Answer: We have made it possible to backup the following information:

- 1-Making a backup of the **DataBase And Folder public/storage** at the same time
- 2-Making a backup of the **Only DataBase**
- 3-Making a backup of the **Only Folder public/storage**
- 4-Making a backup of the **Entire Website And DataBase** at the same time
- 5-Making a backup of the **Only This Entire Website**

How to backup?

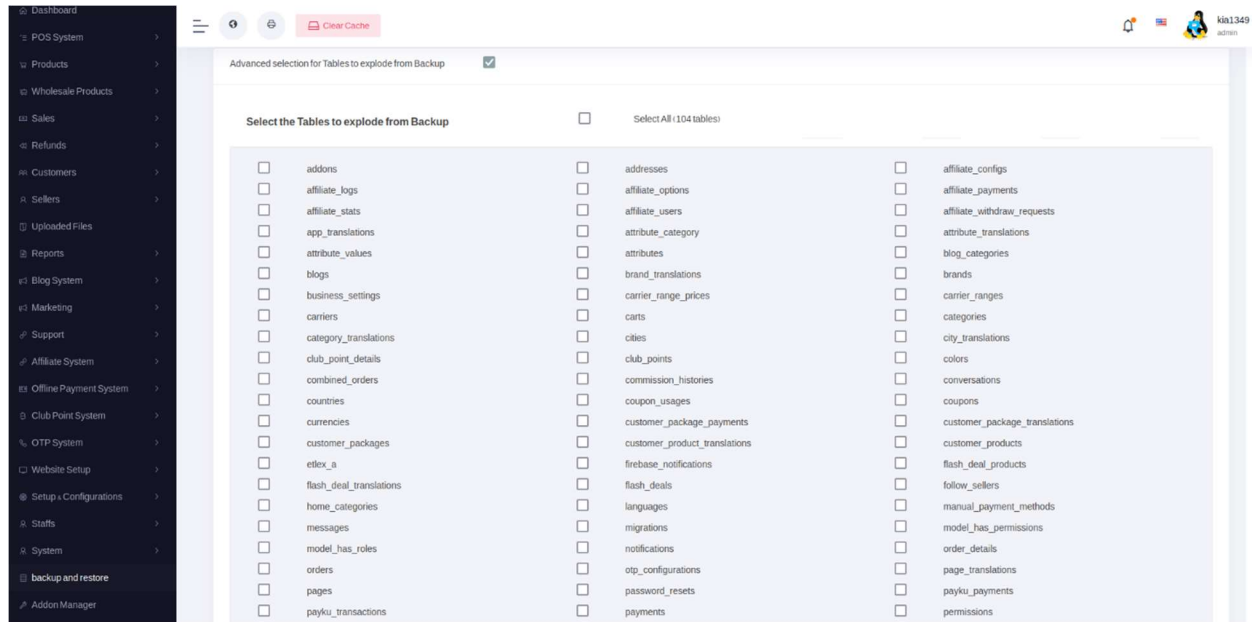

Answer: It is very easy to make a backup and you can make a backup by pressing the “**Create Backup**” button to make a backup in the various ways mentioned.

Tip1: If your backup type is the type that includes the database, you should note that by default, all the tables in the database are backed up.

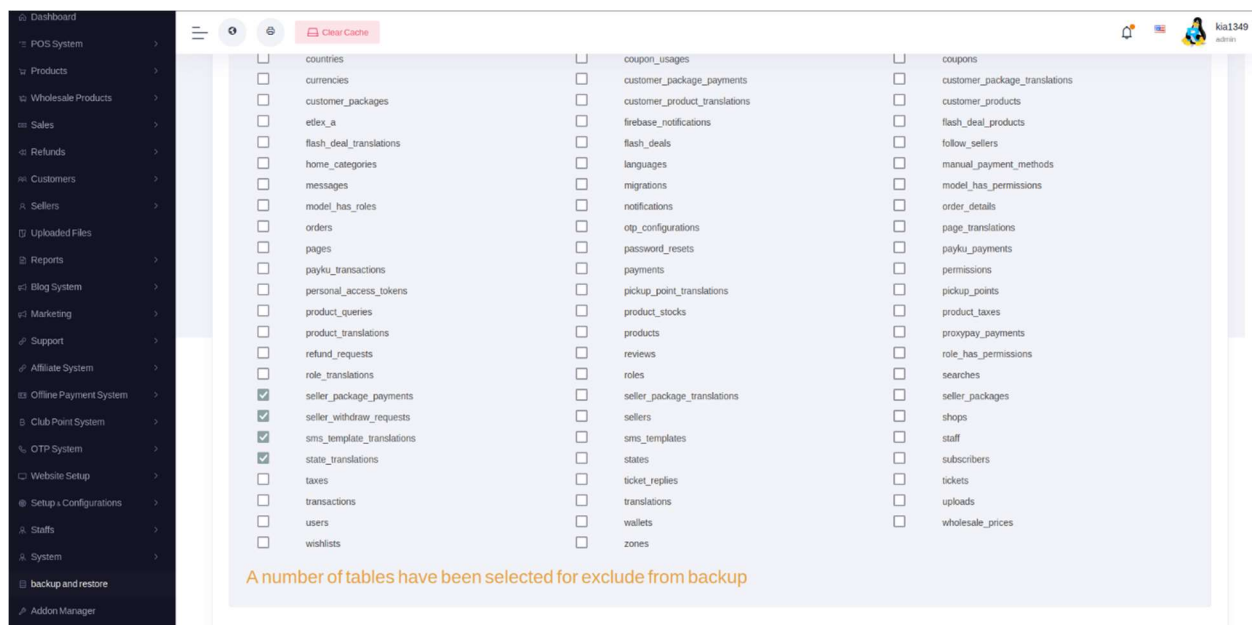

Tip2: If you intend not to backup tables that are rarely used, or large tables, or tables that do not change much, or any table you want, you can select the table you want and check it. The selected tables will not be backed up.

NOTICE: The selected tables will not be backed up.

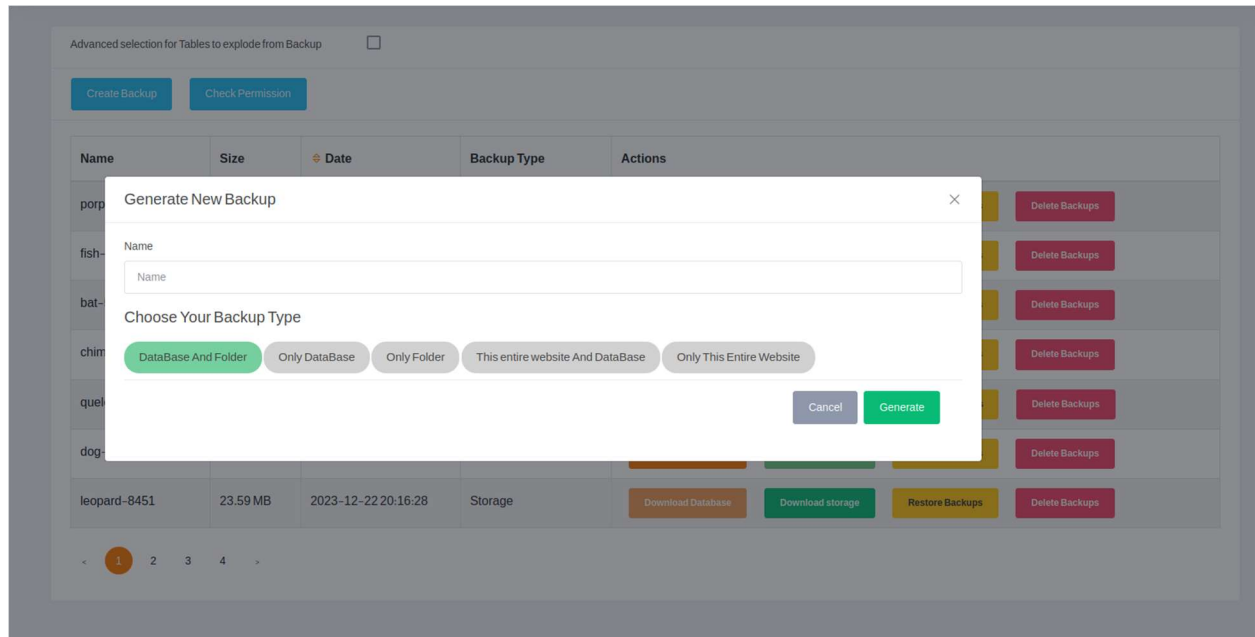

In this case, all tables are included in the backup

In this case, Some tables exclude from backup

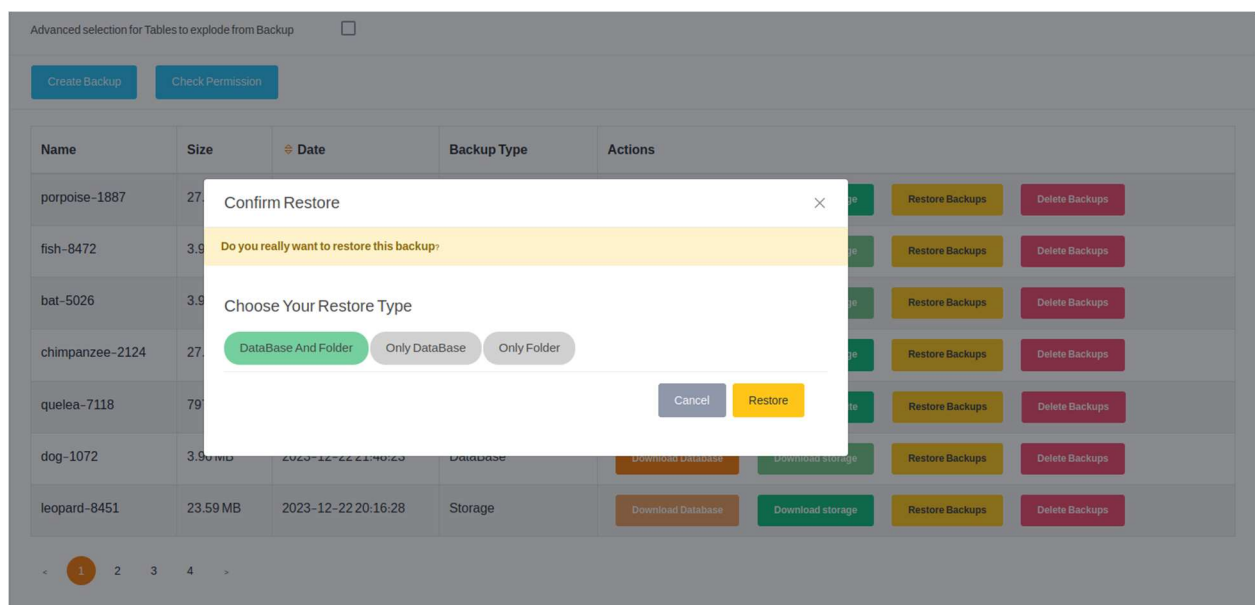

Types of backups you can make

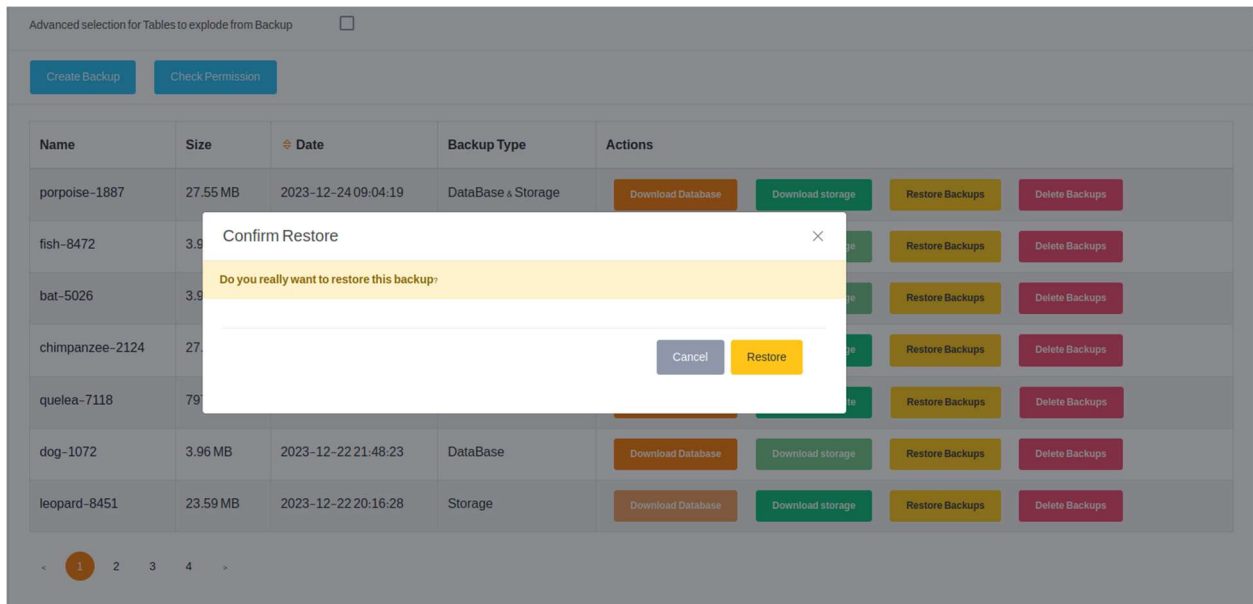

What kind of information can we restore?

Answer: We have made it possible to restore the following information:

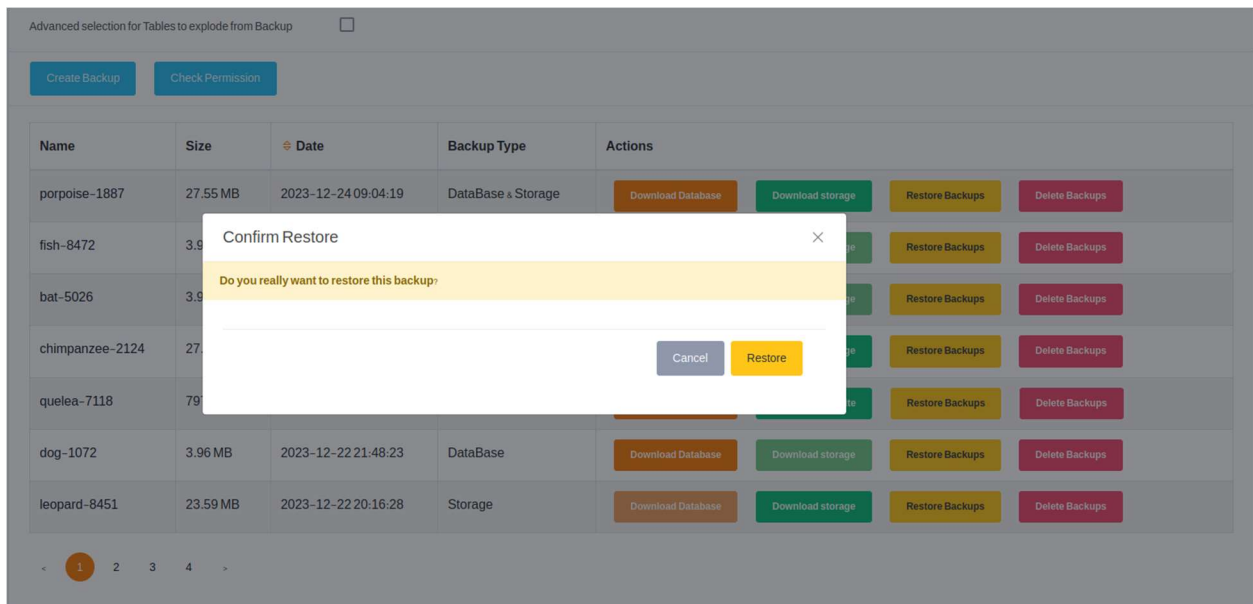

I-If you have backed up DataBase And Folder public/storage at the same time, then you can restore only database or only Folder public/storage or DataBase And Folder public/storage

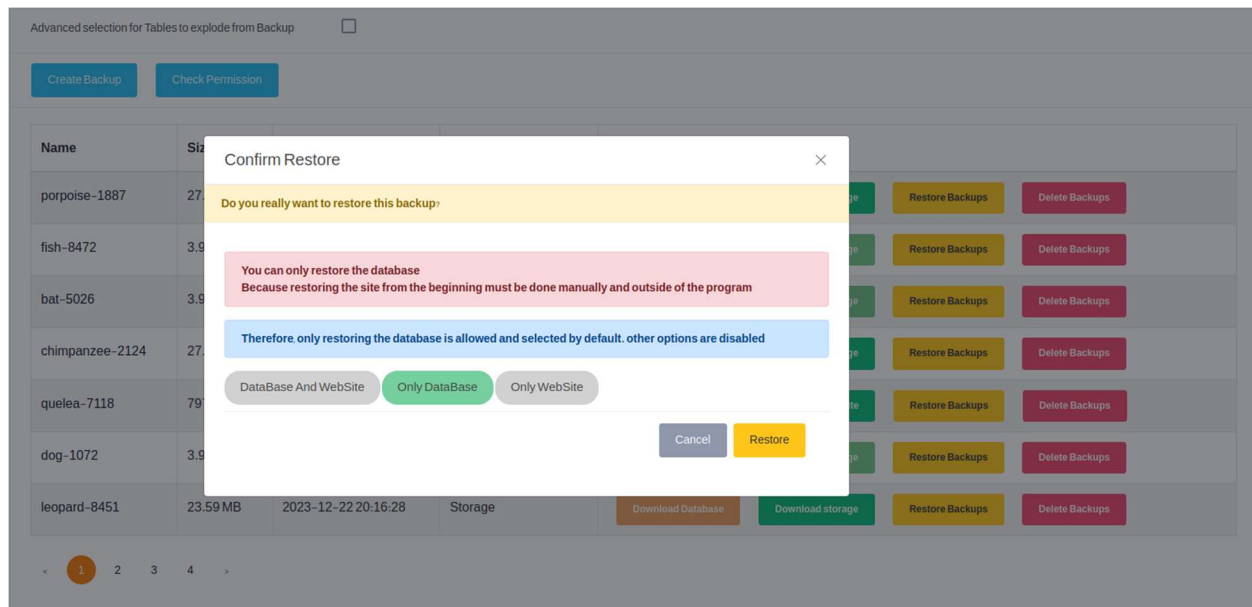

2-If you have backed up backup of the Only DataBase, then you can restore only database

3-If you have backed up backup of the Only Folder public/storage, then you can restore only Only Folder public/storage

4-If you have backed up backup of the Entire Website And DataBase at the same time, then you can restore only database.restoring website. Restoring the website or database and website through this addon is disabled and you have to manually restore the entire site yourself.

What kind of information can we download?

1-If you have backed up the DataBase and Folder at the same time, you can download the compressed files of the database and the public/storage folder.

2-If you have only backed up the DataBase, you can only download the compressed file of the database. In this case, only the "Download Database" button will be active.

3-If you have only made a backup copy of Folder public/storage, you can only download the compressed file of Folder public/storage. In this case, only the "Download Storage" button will be active.

4-If you have backed up Entire Website and Database at the same time, you can download compressed files of Database and Website.

What kind of information can we delete?

1-If you have backed up the DataBase and Folder at the same time, you can delete each of the compressed files of the database and the public/storage folder. Note that if you delete only one of the compressed files, in this case, the type The backup will change.

For example, if you delete the database zip file, your backup type will change to storage

2-If you have backed up Entire Website and Database at the same time, you can delete each of the compressed files of the database and Website. Note that if you delete only one of the compressed files, in this case, the type The backup will change.

3-Otherwise your single backup file deleted

Sincerely: Reza Kia (349)
